### 1. Features

#### (1) High self-aligning capability (rolling direction)

Same as the DF combination in angular contact bearings, self-aligning capability is high because the cross point of the contact lines of balls and grooves comes inside, and thus reducing moment rigidity.

This increases the capacity to absorb errors in installation.

#### (2) High load carrying capacity to vertical direction

The contact angle is set at 50 degrees, and thus increasing load carrying capacity as well as rigidity in vertical direction.

#### (3) High resistance against impact load

The bottom ball groove is formed in Gothic arch and the center of the top and bottom grooves are offset as shown in Fig. 2. The vertical load is generally carried by the top ball rows, where balls are contacting at two points. Because of this design, the bottom ball rows will carry load when a large impact load is applied vertically as shown in Fig. 3. This assures high resistance to the impact load.

#### (4) High accuracy

As showing in Fig. 4, fixing the master rollers to the ball grooves is easy thanks to the Gothic arch groove. This makes easy and accurate measuring of ball grooves.

#### (5) Easy to handle, and designed with safety in mind.

Balls are retained in the retainer, therefore they do not fall out when the ball slide is withdrawn from the rail. (LH10 to LH65)

#### (6) Abundant models and sizes

Each size of LH Series has various models of ball slides, rendering the linear guide available for numerous uses.

#### (7) Fast delivery

Lineup of random-matching rails and ball slides supports and facilitates fast delivery. (LH15 to LH65)

High precision grade and medium preload types

## 2. Ball slide shape

Notes: 1) High-precision grade of random-matching type is available in LH15 to LH45.  
2) LH08, 10, and 12 are not available in random-matching type. For LH08, 10, and 12, accuracy of P4, P5, P6, and PN grades are available.

(2) Accuracy standard

The preloaded assembly has five accuracy grades; Ultra precision P3, Super precision P4, High precision P5, Precision P6 and Normal PN grades, while the random-matching type has High precision PH and Normal PC grade.

• Tolerance of preloaded assembly

## 6. Lubrication components

Refer to pages A38 and D13 for the lubrication of linear guides.

### (1) Types of lubrication accessories

Fig. 11 and Table 10 show grease fittings and tube fittings.

We provide lubrication accessories with extended thread body length (L) for the addition of dust-proof accessories such as NSK K1 lubrication unit, double seal and protector.

We provide a suitable lubrication accessory for the special requirement on dust-proof accessories.

Consult NSK for a lubrication accessory with extended length of thread body for your convenience of replenishing lubricant.

When you require stainless lubrication accessories, please ask NSK.

### (2) Mounting position of lubrication accessories

The standard position of grease fittings is the end face of ball slide. We mount them on a side of end cap for an option. (Fig. 12)

Please consult NSK for installation of grease or tube fittings to the ball slide body or side of end cap.

When using a piping unit with thread of M6 × 1, you require a connector to connect to a grease fitting mounting hole with M6 × 0.75. The connector is available from NSK.

## 7. Dust-proof components

### (1) Standard specification

The LH Series can be readily used as they have a dust protection means for normal conditions. As the standard equipment, the ball slides have an end seal on both ends, and bottom seals at the bottom. However, the bottom seals are not used to LH08 and 10.

**(3) Double seal**

Use a double seal set as showing in **Table 13**, when installing an extra seal to completed standard products. **(Fig. 14)**

When installing a grease fitting after the installation of double seals, a connector as showing in **Fig.14** is required.

**Fig. 14 Double seal**

**(4) Protector**

Use a protector set as showing **Table 14**, when installing a protector to completed standard products. **(Fig.15)**

When installing a grease fitting after the installation of protectors, a connector as showing in **Fig.15** is required.

**(7) Bellows**

- A bellows fastener kit, which includes one of bellows faster, two of  $M_1$  set screws, two of  $M_2$  set screws, and two collars for  $M_2$  set screws as showing Fig. 7.7 on page A55, is supplied with ellows for the ends.

- Middle bellows are supplied with four set screws and four collars.

- Use a bellows fastener kit as showing **Table 17**, when installing bellows to completed standard products.

- When NSK K1, double seals or protectors are used, the set screws of bellows fastener kit are unable to use.

Please contact NSK for details.

- Bellows fastener is available only for the horizontal mounting positions. For other mounting positions, sliding plate is required (see **Fig. 7.10** on page A56).

For fixing to the rail, make tap holes to the rail end surface. Fix the bellows mounting plate to the rail end surface through these tap holes by using a machine screw. NSK processes a tap hole to the rail end face when ordered with a linear guide.

- Please consult NSK for the bellows of LH08, 10, 12, and 15.

**(6) Inner seal**

Inner seal is only available for models shown in the table below.

**LH Series**

**8. Reference number**

Reference numbers shall be set to individual NSK linear guide when its specifications are finalized, and it is indicated on its specification drawing.  
Please specify the reference number, except design serial number, to identify the product when ordering, requiring estimates, or inquiring about specifications from NSK.

**(1) Reference number for preloaded assembly**

**LH 30 1200 ANC 2 -\*\* P5 3**

Series name	Preload code (See page A118.) 0: Z0, 1: Z1, 3: Z3
Size	Accuracy code (See Table 21.)
Rail length (mm)	Design serial number Added to the reference number.
Ball slide shape code (See page A116.)	Number of ball slides per rail
Material/surface treatment code (See Table 20.) C: Special high carbon steel (NSK standard), K: Stainless steel	

**(2) Reference number for random-matching type**

**LAH 30 ANSZ -K**

Ball slide	Option code -K: Equipped with NSK K1
Random-matching ball slide series code LAH: LH Series random-matching ball slide	-F: Fluoride low temperature chrome plating+AS2 grease -F50: Fluoride low temperature chrome plating+LG2 grease
Size	Preload code No code: Fine clearance, Z: Slight preload, H: Medium preload
Ball slide shape code (See page A116.)	Material code No code: Special high carbon steel (NSK standard), S: Stainless steel

**Rail L1H30 1200 LCN -\*\* PC Z**

Rail	Preload code (See page A118.) T: Fine clearance Z: Slight preload (common rail for slight or medium preload)
Random-matching rail series code L1H: LH Series random-matching rail	Accuracy code PH: High precision grade random-matching type PC: Normal grade random-matching type
Size	Design serial number Added to the reference number.
Rail length (mm)	*Butting rail specification N: Non-butting, L: Butting specification
Rail shape code: L L: Standard	
Material/surface treatment code (See Table 20.)	*Please consult with NSK for butting rail specification.

The reference number coding for the assembly of random-matching type is the same as that of the preloaded assembly. However, only preload codes of "fine clearance T", "slight preload Z" and "medium preload H" are available (refer to page A118).

**Table 20 Material/surface treatment code**

Code	Description
C	Special high carbon steel (NSK standard)
K	Stainless steel (LH08 to LH30 only)
D	Special high carbon steel with surface treatment
H	Stainless steel with surface treatment
Z	Other, special

Note: High-precision grade and medium preload of random-matching type are not available in stainless steel.

**Table 21 Accuracy code**

Accuracy	Standard (Without NSK K1)	With NSK K1	With NSK K1 for food and medical equipment
Ultra precision grade	P3	K3	F3
Super precision grade	P4	K4	F4
High precision grade	P5	K5	F5
Precision grade	P6	K6	F6
Normal grade	PN	KN	FN
High precision grade (random-matching type)	PH	KH	FH
Normal grade (random-matching type)	PC	KC	FC

Note: Refer to pages A38 and A61 for NSK K1 lubrication unit.

## A-5-1.5 LS Series

### 1. Features

#### (1) High self aligning capability (rolling direction)

Same as the DF combination in angular contact bearings, self-aligning capability is high because the cross point of the contact lines of balls and grooves comes inside, and thus reducing moment rigidity. This increases the capacity to absorb errors in installation.

#### (2) High load carrying capacity to vertical direction

The contact angle is set at 50 degrees, and thus increasing load carrying capacity as well as rigidity against the load in vertical direction.

#### (3) High resistance against impact load

The bottom ball groove is formed in Gothic arch and the center of the top and bottom grooves are offset as shown in Fig. 2. The vertical load is usually carried by top 2 rows, where balls are contacting at two points. Because of this design, the bottom rows will carry the load when a large impact load is applied as shown in Fig. 3. This assures high resistance to the impact load.

#### (4) High accuracy

As showing in Fig. 4, fixing the measuring rollers to the ball grooves is simple thanks to the Gothic arch groove. This makes easy and accurate measuring of ball grooves.

#### (5) Easy to handle, and designed with safety in mind.

Balls are retained in the retainer and do not fall out when the ball slide is withdrawn from the rail.

#### (6) Abundant models and sizes come in series.

Each size of LS Series has several ball slide models, rendering the linear guide available for numerous uses. The LS Series also has standardized long stainless-steel rail (maximum 3 500 mm).

#### (7) Fast delivery

Lineup of random-matching rails and ball slides supports and facilitates fast delivery.

High precision grade and medium preload types are also available in random matching. (Special high-carbon steel products)

## 6. Lubrication components

Refer to pages A38 and D13 for the lubrication of linear guides.

### (1) Types of lubrication accessories

Fig. 11 and Table 10 show grease fittings and tube fittings.

We provide lubrication accessories with extended thread body length (L) for the addition of dust-proof accessories such as NSK K1 lubrication unit, double seal and protector.

We provide a suitable lubrication accessory for the special requirement on dust-proof accessories.

Consult NSK for a lubrication accessory with extended length of thread body for your convenience of replenishing lubricant.

When you require stainless lubrication accessories, please ask NSK.

### (2) Mounting position of lubrication accessories

The standard position of grease fittings is the end face of ball slide. We mount them on a side of end cap for an option. (Fig. 12)

Please consult NSK for installation of grease or tube fittings to the ball slide body or side of end cap.

When using a piping unit with thread of M6 × 1, you require a connector to connect to a grease fitting mounting hole with M6 × 0.75. The connector is available from NSK.

## 7. Dust-proof components

### (1) Standard specification

The LS Series can be readily used as they have a dust protection means for normal conditions. As the standard equipment, the ball slides have an end seal on both ends, and bottom seals at the bottom.

**(3) Double seal**

Use a double seal set as showing in **Table 13**, when installing an extra seal to completed standard products. (**Fig. 14**)

When installing a grease fitting after the installation of double seals, a connector as showing **Fig.14** is required.

**Fig. 14 Double seal**

**(4) Protector**

Use a protector set as showing **Table 14**, when installing a protector to completed standard products. (**Fig.15**)

When installing a grease fitting after the installation of protectors, a connector as showing **Fig.15** is required.

**(7) Bellows**

• A bellows fastener kit, which includes one of bellows faster, two of  $M_1$  set screws, two of  $M_2$  set screws, and two collars for  $M_2$  set screws as showing Fig. 7.7 on page A55, is supplied with bellows for the ends.

• Middle bellows are supplied with four set screws and four collars.

Use a bellows fastener kit as showing **Table 17**, when installing bellows to completed standard products.

• When NSK K1, double seals or protectors are used, the set screws of bellows fastener kit are unable to use.

Please contact NSK for details.

• Bellows fastener is available only for the horizontal mounting positions. For other mounting positions, sliding plate is required (see **Fig. 7.10** on page A56).

For fixing to the rail, make tap holes to the rail end surface. Fix the bellows mounting plate to the rail end surface through these tap holes by using a machine screw. NSK processes a tap hole to the rail end face when ordered with a linear guide.

**(6) Inner seal**

Inner seal is only available for the models shown below.

### 8. Reference number

Reference numbers shall be set to individual NSK linear guide when its specifications are finalized, and it is indicated on its specification drawing.

Please specify the reference number, except design serial number, to identify the product when ordering, requiring estimates, or inquiring about specifications from NSK.

3) The basic load rating comply with the ISO standard. (ISO 14728-1, 14728-2)  
 C<sub>50</sub>: the basic dynamic load rating for 50 km rated fatigue life C<sub>100</sub>: the basic dynamic load rating for 100 km rated fatigue life  
 4) High-precision grade and medium preload of random-matching type are available for special high carbon steel products.  
 \* Standard mounting hole of LS15 rail is for M3 bolts (Hole size: 3.5 × 6 × 4.5).  
 If you require mounting hole for M4 bolts (Hole size: 4.5 × 7.5 × 5.3), please specify when ordering.
